

Hand Assembly Technician

Ideal candidates will have substantial experience working as a PCB assembly technician in a CEM/OEM environment. The ideal candidate should be able to read complex electromechanical drawings, work with minimal supervision and have an excellent attention to detail.

Key experience areas required:

Able to hand place SMT components down to 0402.

To recognise, correctly orientate, and solder a broad selection of both pin-through-hole and SMT packages while observing ESD precautions.

Experience of reworking/modifying PCBs.

Candidates should provide information pertaining to the various types of components with which they have experience, along with details of any specialised assembly equipment used previously.

IPC qualifications preferred but not essential.

Salary dependent upon experience but higher than industry average.
