

Due to our increasing workload in the defence and automotive sectors, we are looking to recruit a senior SMT hand assembly and rework technician

The main duties include the responsibility for the following:

Ideal candidates will have substantial experience working as a PCB Assembler in a CEM environment on high specification assemblies.

Be used to working to IPC-610 Class 3 standards.

Needs to be able to read complex electro/mechanical drawings, work with minimal supervision and have an excellent attention to detail.

Key experience areas required:

Able to hand place SMT components down to 0402.

To recognise, correctly orientate, and solder a broad selection of both SMT and through-hole packages while observing ESD precautions.

Experience of reworking/modifying PCBs.

Candidates should provide information pertaining to the various types of components with which they have experience, along with details of any specialised assembly equipment used previously.

IPC qualifications preferred but not essential.
